

EXECUTIVE BRIEF

Cyclistic Bike-Share: Consumer Behavior & Conversion Strategy

An exploratory analysis of 5.9 million historical trips identifying behavioral gaps between Casual and Annual riders and delivering data-driven strategies to maximize Annual Recurring Revenue (ARR).

Behavior-Driven Conversion Strategy

Data reveals a large behavioral divide. Casual riders are leisure-focused tourists visiting coastal landmarks on summer weekends. Annual members are routine mid-week commuters. A standard 12-month commuter pass will not convert a tourist. I have developed three targeted incentives to bridge this gap.

1. Launch a 90-Day "Summer Pass"

2. Target Weekend Coastal Stations

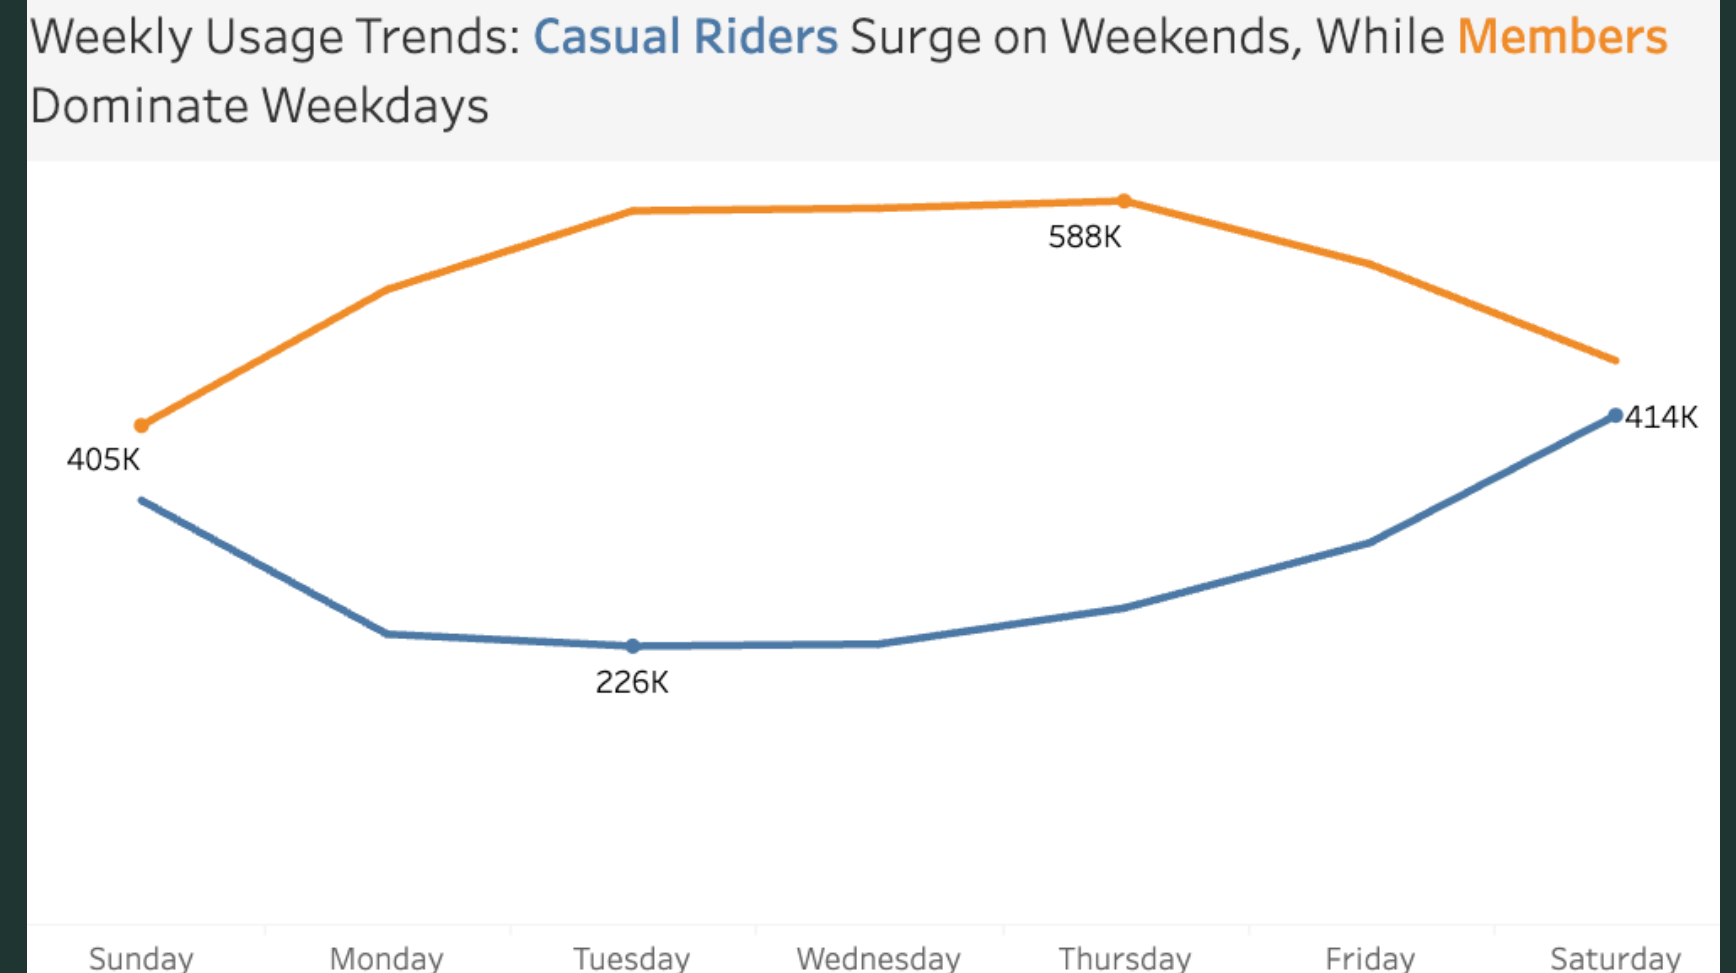

3. Implement a 45-Min "Weekend Explorer" Perk

PILLAR 01

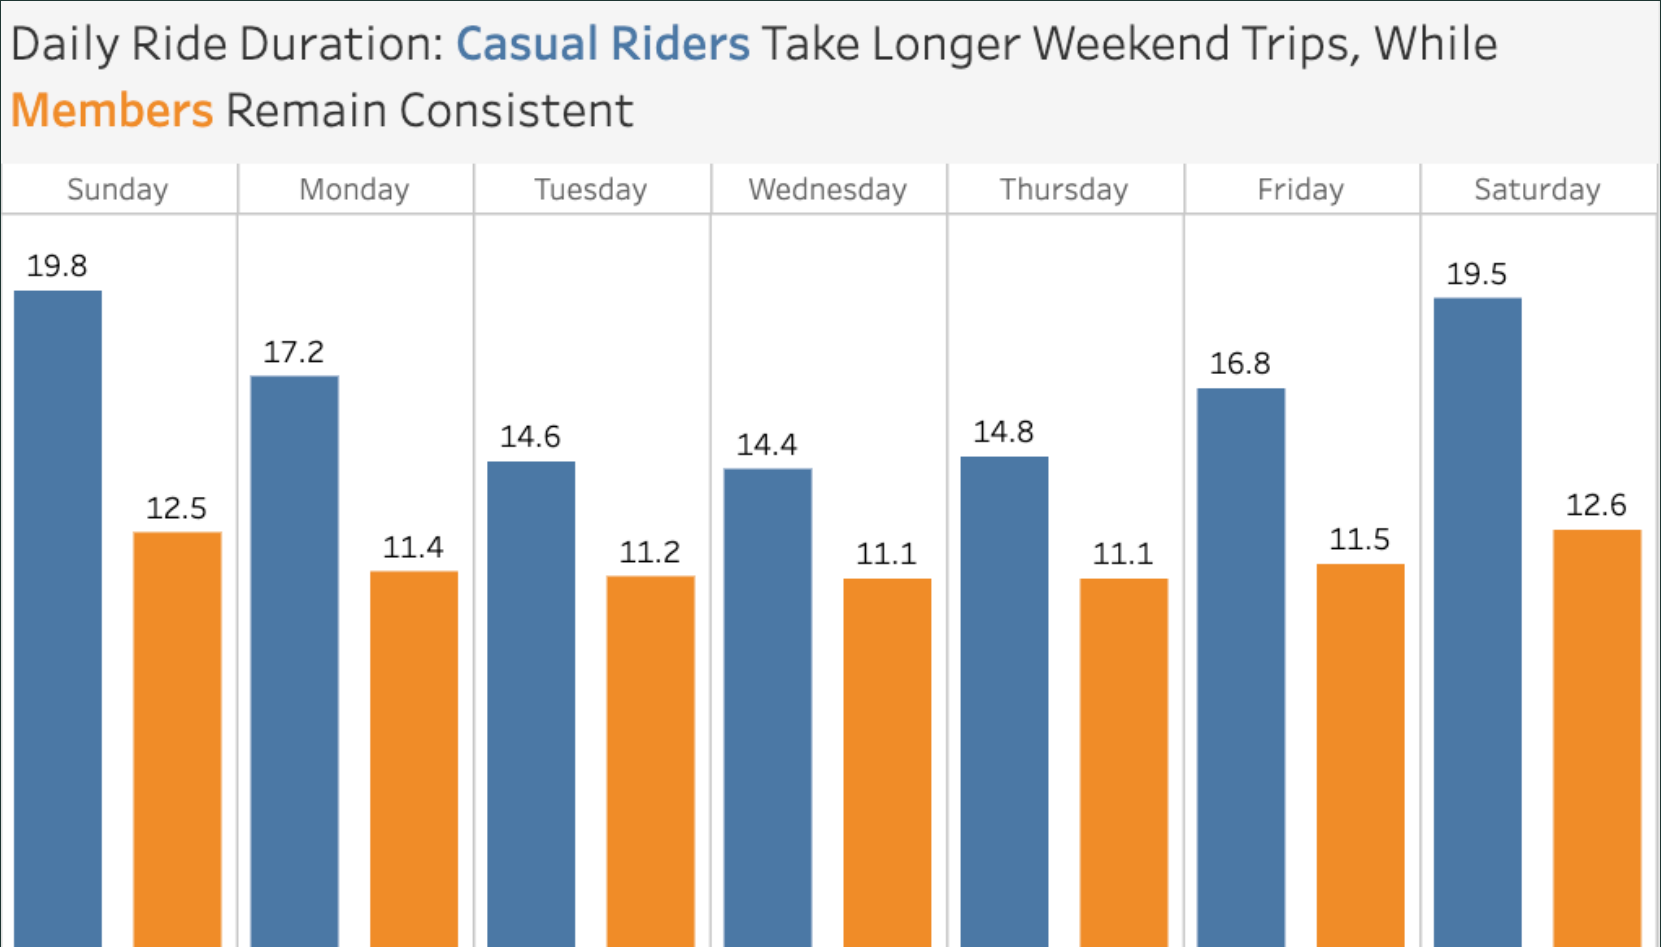

The Commuter vs. The Tourist

Annual members show routine commuting behavior, with peak usage mid-week at downtown transit hubs. Casual riders behave like leisure tourists. Their ridership surges on weekends, peaking at over 413,000 rides on Saturdays. Marketing must shift to capture weekend volume.

The Duration Gap

Casual riders average over 19 minutes per trip, increasing to more than 22 minutes on Sundays. This confirms they ride for extended leisure, not brief transit. To encourage conversion, I recommend launching a "Weekend Explorer" perk that raises the annual 30-minute limit to 45 minutes.

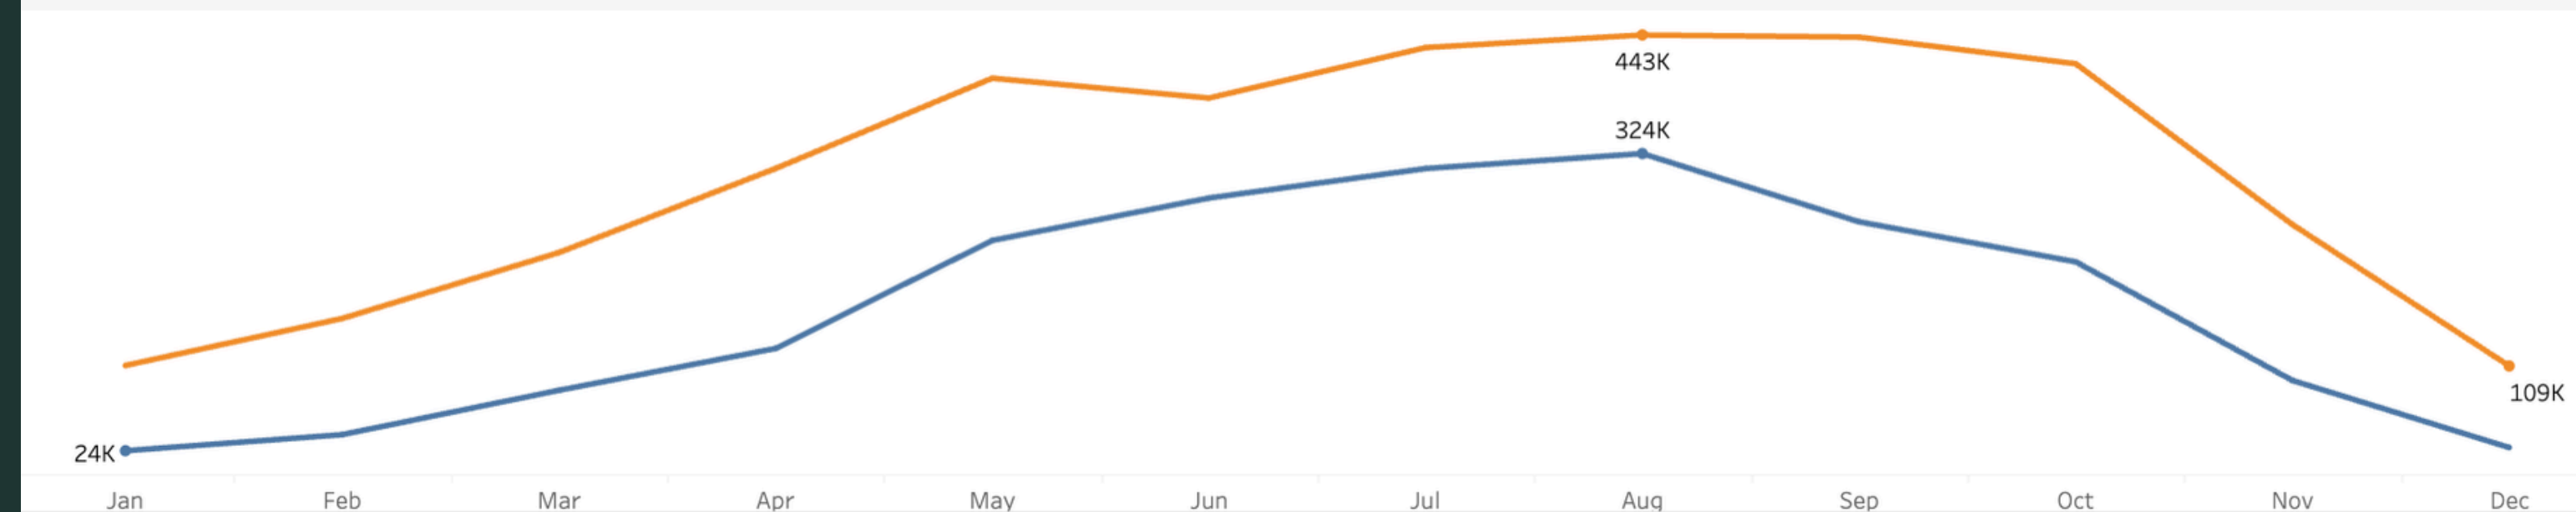

The Fair-Weather Rider

Casual usage is highly seasonal, peaking at over 323,000 rides in August and dropping below 24,000 in January. Selling a 12-month commuter pass to a 4-month leisure rider is ineffective. I recommend a 90-day "Summer Pass" to capture demand during peak months.

Annual Seasonality: **Casual** and **Member** Usage Both Surge in the Summer, While Usage Declines in the Winter Months

IMPLEMENTATION

Next Steps & Timeline

To prepare for a late-April launch, the next step is to collaborate with the Marketing Analytics team to model target pricing for the new "Summer Pass" using seasonal volume forecasts and to finalize digital ad spend for the top 10 coastal stations.
